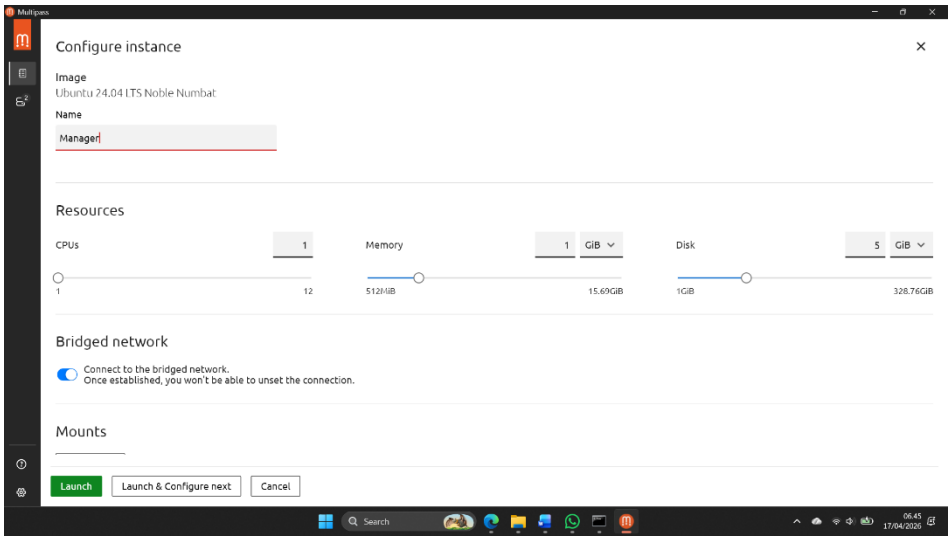
BAB I

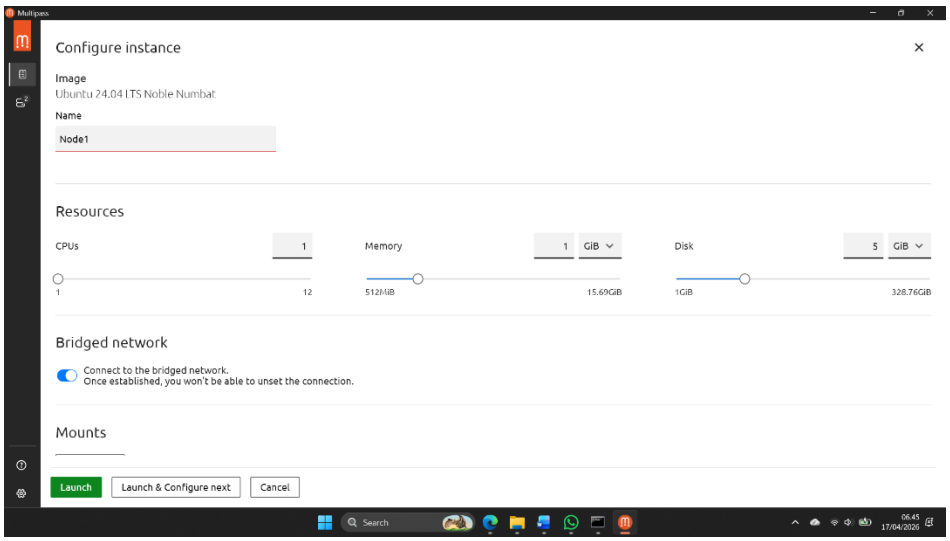
PRAKTI DAN PEMBAHASA ACARA 17 DAN 18

1.1 Acara 17

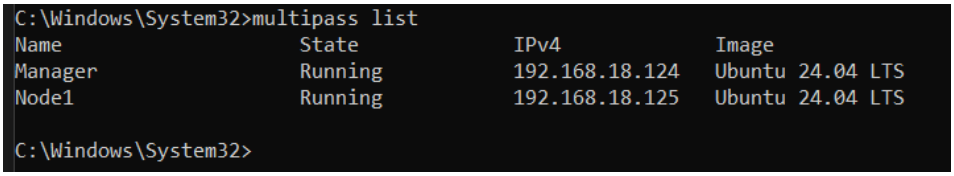
a. Buat 2 VPS di Multipass



Gambar 1.1 Membuat VM untuk Manager



Gambar 1.2 Membuat VM untuk Node1

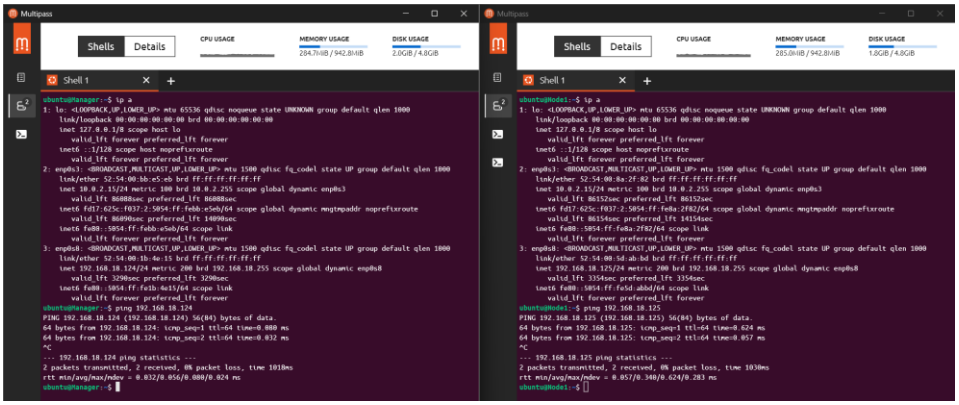


```
C:\Windows\System32>multipass list
Name                    State             IPv4             Image
Manager                 Running           192.168.18.124   Ubuntu 24.04 LTS
Node1                   Running           192.168.18.125   Ubuntu 24.04 LTS

C:\Windows\System32>
```

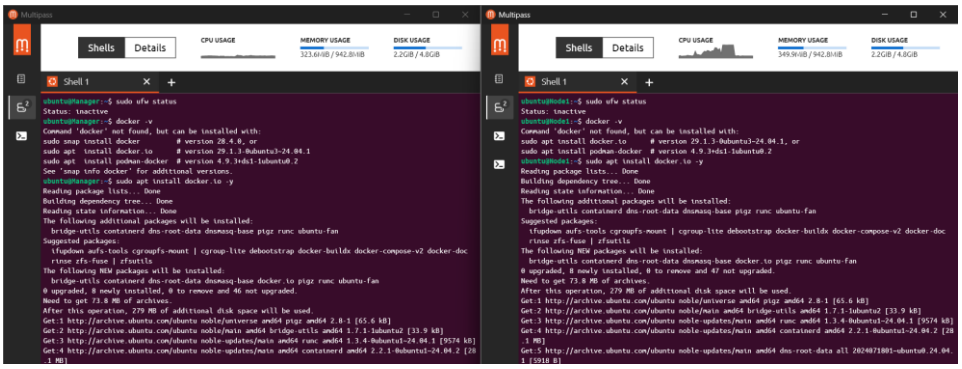
Gambar 1.3 Menampilkan ip setiap VM

b. Cek IP address masing-masing dan Test koneksi antar node



Gambar 1.4 Cek ip dan ping setiap VM

c. Cek firewall dan Install Docker di kedua VPS



Gambar 1.5 Cek firewall dan install docker

d. Inisialisasi Docker Swarm pada Manager

```
ubuntu@Manager:~$ sudo docker swarm init --advertise-addr 192.168.18.124
Swarm initialized: current node (xbdugpzw6kucv6zdldqezdyj6) is now a manager.

To add a worker to this swarm, run the following command:

    docker swarm join --token SWMTKN-1-0slp6zs281vfg2kx20mvluebt6zdkksnlu738450htty2g2nim-9gr3agfbnvaiglu4h
dci80b8 192.168.18.124:2377

To add a manager to this swarm, run 'docker swarm join-token manager' and follow the instructions.
ubuntu@Manager:~$
```

Gambar 1.6 Inisialisasi warm pada manager

e. Join worker ke swarm

```
ubuntu@Node1:~$ sudo docker swarm join --token SWMTKN-1-0slp6zs281vfg2kx20mvluebt6zdkksnlu738450htty2g2nim-9
gr3agfbnvaiglu4hadci80b8 192.168.18.124:2377
This node joined a swarm as a worker.
ubuntu@Node1:~$
```

Gambar 1.7 Join Node ke swarm Manager

f. Cek status swarm di Manager

```
ubuntu@Manager:~$ sudo docker info | grep -i swarm
 Swarm: active
ubuntu@Manager:~$
```

Gambar 1.8 Cek status swarm

g. Cek node yang terhubung di Manager

```
ubuntu@Manager:~$ sudo docker node ls
ID                            HOSTNAME   STATUS    AVAILABILITY   MANAGER STATUS   ENGINE VERSION
xbdugpzw6kucv6zdldqezdyj6 *   Manager    Ready     Active         Leader           29.1.3
pphvezq2b27tna27ljob5cwri     Node1      Ready     Active                          29.1.3
ubuntu@Manager:~$
```

Gambar 1.9 Cek node yang terhubung

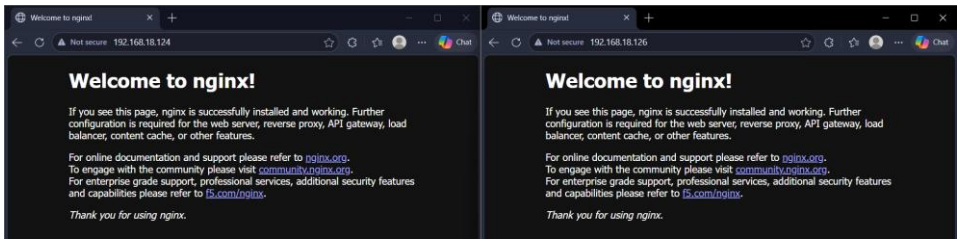
1.2 Acara 18

a. Membuat service dan Cek service

```
ubuntu@Manager:~$ sudo docker service create --name web -p 80:80 nginx
olbq34us741xhv8gbpagngdvv
overall progress: 1 out of 1 tasks
1/1: running
verify: Service olbq34us741xhv8gbpagngdvv converged
ubuntu@Manager:~$ docker service ls
permission denied while trying to connect to the docker API at unix:///var/run/docker.sock
ubuntu@Manager:~$ sudo docker service ls
ID             NAME      MODE         REPLICAS   IMAGE          PORTS
olbq34us741x   web       replicated   1/1        nginx:latest   *:80->80/tcp
ubuntu@Manager:~$
```

Gambar 1.10 Buat dan cek service

b. Cek service lewat browser untuk masing masing swarm



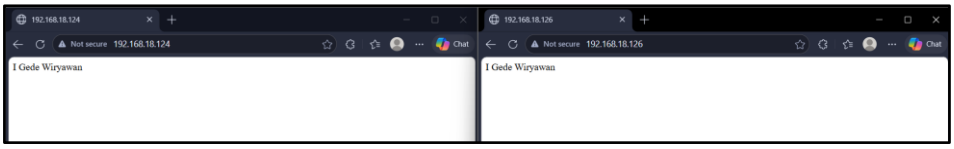
Gambar 1.11 Cek service di browser

c. Update service

```
ubuntu@Manager:~$ sudo docker service update --image igdw/first-repo web
web
overall progress: 1 out of 1 tasks
1/1: running
verify: Service web converged
ubuntu@Manager:~$
```

Gambar 1.12 Update service

d. Cek hasil update di browser



Gambar 1.13 cek update service

e. Inspect service di Manager

```
ubuntu@Manager:~$ sudo docker service inspect web --pretty

ID:             olbq34us741xhv8gbpagngdvv
Name:           web
Service Mode:   Replicated
 Replicas:      1
UpdateStatus:
 State:         completed
 Started:       3 minutes ago
 Completed:     About a minute ago
 Message:       update completed
Placement:
UpdateConfig:
 Parallelism:   1
 On failure:    pause
 Monitoring Period: 5s
 Max failure ratio: 0
 Update order:      stop-first
RollbackConfig:
 Parallelism:   1
 On failure:    pause
 Monitoring Period: 5s
 Max failure ratio: 0
 Rollback order:    stop-first
ContainerSpec:
 Image:         igdw/first-repo:latest
 Init:          false
Resources:
Endpoint Mode:  vip
Ports:
 PublishedPort = 80
  Protocol = tcp
  TargetPort = 80
  PublishMode = ingress

ubuntu@Manager:~$
```

Gambar 1.14 Cek inspect service

f. Cek service berjalan di Manager

```
ubuntu@Manager:~$ sudo docker service ps web | grep Running
j41ifpflpwam   web.1       igdw/first-repo:latest   Manager   Running        Running 2 minutes ago
```

Gambar 1.15 Cek service yang berjalan

g. Keluar dari swarm

```
ubuntu@Node1:~$ sudo docker swarm leave
Node left the swarm.
ubuntu@Node1:~$
```

Gambar 1.16 Keluar swarm untuk Node

```
ubuntu@Manager:~$ sudo docker swarm leave --force
Node left the swarm.
ubuntu@Manager:~$
```

Gambar 1.17 Keluar swarm untuk Manager
